

EDWAY NET SCRIPT

Good evening everyone, this is *(Name)* *(Call sign)* net control opening the EDWAY NET.

This net meets every Tuesday at 7 pm local time on the WA7DEM Repeater system at 443.725 with a tone of 103.5.

Emergency traffic always has priority. Any stations with emergency or priority items check in now please.

.....*leave a break for traffic*.....

Let's check with our mobile stations before they go out of range. Are there any mobile stations that wish to check in?

.....*pause*.....

The purpose of this net is to allow hams in South Snohomish County to meet other amateur radio operators and to pass on information of events and other items of interest to our local amateur community. This is an open net and everyone is invited to join us.

We will now have a roll call of our active members. If you want to check in but won't stick around then just say, "In and Out."

To be added to the active list simply check in a few times. To stay on the active list please check in at least once per month.

At the end of the roll call we will check for any visitors, late check ins, comments, questions, and announcements.

Now we will start the Roll Call of active stations. After all check-ins there will be time for comments.

.....*roll call*.....

Any late check ins or visitors to the net please come now. Please give your call sign phonetically and your name.

Now we will check to see if there are any comments, questions, and announcements. Please come back with just your callsign and each of you will get a turn.

.....*prompt each check-in for comments*.....

Announcements from net control as follows:

.....*pause*.....

Is there anything else to be mentioned for the EDWAY NET this evening?

.....*pause*.....

The net control operator schedule is published on the web at www.edwaynet.com.
Our net control next week will be *(Name)* *(Callsign)*.

This is *(Call sign)* Net control for the EDWAY NET closing the net at *(Time)*.
We wish to thank the Snohomish County Auxiliary Communications Service for
the use of the WA7DEM repeater and RETURN the repeater to normal Amateur
use at this time. See you next week!
